

# Vendor Access Management (VAM)

Temporary access for maintenance tasks and visitors

## Overview

Schlage Express™ Offline Access Control Software provides a simple and effective means to manage access control within your facility. Vendor Access Management (VAM) is supplemental software to enable property owners to issue temporary credentials for maintenance tasks and visitor access. It supports the BE367 (Schlage Programmable Electronic Deadbolt) and the FE210 (Schlage Programmable Electronic Interconnect). VAM iButton credentials carry access rights for up to 20 doors without requiring management to tour the doors in advance. The credential creates audits for each door access event, which property owners or managers can view when the credential is returned and read. Also, the supported products will generate an audit event on each lock that can be retrieved when the original VAM iButton is not available. VAM only works in conjunction with Schlage Express™ Offline Access Control Software.

## Features and benefits

- VAM credentials are treated as “Pass-Through” function credentials - allowing access even when secure lockouts (holidays, frozen secure, etc.) and critical battery conditions exist
- Compatible with read/write credentials only (IBF-130, 48-538)
- Supported devices include BE367 and FE210
- Supports Windows XP, Windows 7 and Windows 8
- Define start and stop dates and times, as well as schedules within that period when the credential will grant access
- Create and use audit retrieval iButton – pulls VAM audits from the lock with a single orange fob
  - Holds up to 208 audits
- Battery Status (good, low, and critical) recorded as part of the audit event for each accessed lock
